Flexible pre-insulated plastic pipe system from **Austroflex**[®]

With a unique combination of excellent insulating properties of polyurethane foam (PUR) as the core insulation and the highly flexible cross-linked polyethylene foam (PEX) as edge insulation, **AUSTROFLEX** is the new standard in modern pipeline construction. The result is a highly flexible pre-insulated district heating pipe system **AUSTROPUR** with excellent thermal insulation.

The sturdy, corrugated outer casing of HDPE protects the insulation and corrosion-proof pipe made of PE-Xa optimally, and contributes to both systems **AUSTROPUR** and **AUSTROPEX** due to its corrugation leading to outstanding flexibility. The high flexibility and low weight make **AUSTROPUR** and **AUSTROPEX** the ideal pre-insulated piping systems for rapid and inexpensive installation. On one hand, tube coil lengths up to 100m already minimize a large part of necessary pipe connections and on the other hand the length of 100m on site without the use of a special unwinding tool, proves to be advantages.

Special lengths over 100m are also possible. Unwinding tools for this purpose can be provided upon request.

The **AUSTROPUR** and **AUSTROPEX** products benefit from a 10year warranty.
